

Courses to take Summer 2016 to reduce your course load or time to degree:

1. Complete any missing major prep courses (Math, Physics)
2. Electrical Engineering (EL ENGR) 3 - Introduction to Electrical Engineering.
Requisite: Physics 1B. This course is a requisite for the circuits sequence and will allow students to take the first circuits course, EE 10, in the Fall.
3. Do NOT take Computer Science (COM SCI 31) - Introduction to Computer Science. You will not have any Computer Science courses in the Fall as COM SCI 32 is not offered until Winter.
4. Computer Science (COM SCI) 32 (Introduction to Computer Science II) Requisite: COM SCI 31.
If you have credit for COM SCI 32, this will allow you to take COM SCI 33 in the Fall. It is not offered again until Spring.

Summer Advising:

- Attending orientation is recommended for all incoming students. Please visit the orientation website for details: www.newstudents.ucla.edu/transferstudents.htm
- If you are unable to attend orientation, you must sign up for email advising in order to enroll in courses for the fall quarter. Email orientation@seas.ucla.edu and notify us starting in mid-July that you cannot attend (include your name and UID).

Requisite Evaluations for Summer Enrollment:

1. For transfers from California Community Colleges: First check assist.org to see if the course you took at your community college meets the requisites for the UCLA summer course you are attempting to enroll in.
2. If you were unable to determine if you meet the requisite, that is listed for the UCLA summer course, then you may have your community college course(s) or a course taken at another school evaluated. Email course_eval@seas.ucla.edu to initiate a course evaluation request. Again, this process is only required if it is not clear on assist.org how your course transfers over.
